The Permian Basin spans approximately 250 miles wide and 300 miles long across western Texas and southeastern New Mexico. It's the most prolific oil-producing region in the U.S., contributing nearly half of the nation's crude output. The basin comprises three primary sub-regions: the Midland Basin, Delaware Basin, and Central Basin Platform.

Oil production and rig count in the Permian Basin, 2012–2024.

Blue line = oil output (million barrels per day); Red line = active drilling rigs.

Production has hit record highs despite a lower rig count in recent years (source: [dallasfed.org](https://www.dallasfed.org))

Location Overview: Permian Basin

Industry Trends

Production Growth: As of early 2025, the Permian Basin's oil production has reached approximately **6.2 million barrels per day (bpd)**, marking a 7.5% increase from the previous year (source: [YCharts](https://ycharts.com)).

Rig Count: The number of active drilling rigs in the basin stands at 291, a slight increase from earlier in the year but still down 4% compared to the same period last year (source: [Midland Reporter-Telegram](https://www.midlandreporter-telegram.com))

Investment Activity: Despite some market volatility, companies like U.S. Energy Development Corporation plan to invest up to \$1 billion in Permian projects throughout 2025, indicating **sustained confidence** in the region's potential (source: [Oil Gas Leads+IPR Newswire+1](https://www.oilgasleads.com))
